

Eclipse and GitHub

Installation

1. Download JDK 1.8 from Oracle and install on your computer
2. Download the current version of Eclipse and install on your computer

Import Repository from Git Hub

In Chrome:

Login to GitHub → Go to your ICS3U repository and copy the link

In Eclipse:

Window → Show View → Other... Git Repositories

Click on “Clone a Git Repository”

Follow the steps until it shows up in repositories window

(You should now see your repository in the bottom left Git Repositories window)

Import Your Project *(assuming you have already pushed a project to this repository)*

Right click on your ICS3U repository in the bottom window → click Import Projects...

Follow through with the prompts

(You should now see your project in the Package Explorer Window)

Make any changes you would like.

When you are finished, SAVE EVERYTHING.

Pushing to GitHub

Right click on Unit 1 → Team → Commit...

Drag all your files from Unstaged to Staged

Write your message

Click “Commit and Push”

Pulling from GitHub

Right click on ICS3U → Team → Pull
